

# Jonathan T. Bravman, M.D.

### **SLAP Repair Rehab Protocol**

#### POST OPERATIVE MANAGEMENT

- Pain control with ice and anti-inflammatory
- Protect repair in sling x4-6 weeks

## Phase I- Immediate Postoperative Phase "Restrictive Motion" (Week 0-6)

#### Week 0-2:

- Maintain elbow/hand ROM with hand gripping exercises
- Passive ROM exercises
  - o Flexion to 60 degrees (Week 2: Flexion to 75 degrees)
  - o Elevation in scapular plane to 60 degrees
  - o ER/IR with arm in scapular plane less than 30 degrees
  - WE with arm at the side to 0 degrees
  - o IR to 45 degrees
  - \*\*\*NO active ER, extension, or abduction\*\*\*
- Submaximal isometrics for shoulder musculature
- Start active biceps at week 2 but no resisted biceps contraction

#### Week 3-4:

- · Discontinue sling at 4 weeks
- Continue Passive ROM exercises
  - o Flexion to 90 degrees
  - o Abduction to 75-85 degrees
  - o ER in scapular plane at 30 degrees abduction to 30 degrees
  - IR in scapular plane at 30 degrees abduction to 55-60 degrees
  - o NO active ER, extension, or elevation
  - \*\*\* Progress based on evaluation of the patient\*\*\*
- Initiate rhythmic stabilization drills
- · Initiate proprioception training
- Continue isometrics

#### Week 5-6:

- Gradually improve ROM and begin AROM
  - o Flexion to 145 degrees
  - o ER at 45 degrees abduction: 45-50 degrees
  - IR at 45 degrees abduction: 55-60 degrees
  - At 6 weeks begin light and gradual ER at 90 abduction- progress to 30-40 ER
- May initiate stretching exercises
- May initiate light (easy) ROM at 90 degrees abduction
- Continue tubing ER/IR (arm at side)
- PNF manual resistence
- Initiate active shoulder abduction without resistance
- Initiate "Full Can" exercise with weight of arm
- Initiate prone rowing, prone horizontal abduction
- OK to begin biceps isotonics (light) at 6 weeks

#### Phase II- Intermediate Phase: Moderate Protection Phase (Week 7-14)

#### Week 7-9:

- Gradually progress ROM
  - o Flexion to 180 degrees
  - o ER at 90 degrees abduction: 90-95 degrees
  - o IR at 90 degrees abduction: 70-75 degrees
- Continue to progress isotonic strengthening program
- Continue light biceps isotonics
- Continue PNF strengthening
- Initiate Throwers Ten Program

## Week 10-12:

- Full AROM allowed in all directions
- May initiate slightly more aggressive strengthening
- Progress ER to throwers motion
- ER at 90 degrees abduction: 110-115 in throwers
- Progress isotonic strengthening exercises
- Continue all stretching exercises
- Continue all strengthening exercises

## Phase III- Minimal Protection Phase (Week 14-20)

#### Criteria to enter Phase III:

- 1. Full non-painful ROM
- 2. Satisfactory stability
- 3. Muscular strength (good grade or better)
- 4. No pain or tenderness

#### Week 14-16:

- Continue all stretching exercises (capsular stretches)
- Maintain throwers motion (Especially ER)
- Continue strengthening exercises
- Throwers Ten Program or fundamental exercises
- PNF manual resistance
- Endurance training
- Initiate light plyometric program
- Restricted sport activities (light swimming, half golf swings)

## Week 16-20:

- · Continue all exercise listed above
- Continue all stretching
- Continue Throwers Ten Program
- Continue Plyometric Program
- Initiate interval sport program (throwing, etc)

## Phase IV- Advanced Strengthening Phase (Week 20-26)

## Criteria to enter Phase IV:

- 1. Full non-painful ROM
- 2. Satisfactory static stability
- 3. Muscular strength 75-80% of contralateral side
- 4. No pain or tenderness
- \*OK to return to contact sports or heavy labor if above criteria met at 20 weeks

### Week 20-26:

- · Continue flexibility exercises
- Continue isotonic strengthening program
- PNF manual resistance patterns
- Plyometric strengthening

· Progress interval sport programs

## Phase V- Return to Activity Phase (Month 6 to 9)

## Criteria to enter Phase V:

- 1. Full functional ROM
- 2. Muscular performance isokinetic (fulfills criteria)
- 3. Satisfactory shoulder stability
- 4. No pain or tenderness

\*OK to return to pitching if above criteria met and has successfully completed the interval throwing program with pain or recurrent symptoms

## **Exercises**

- Gradually progress sport activities to unrestrictive participation
- Continue stretching and strengthening program

## Criteria for discharge:

- 1. Full, pain free range of motion
- 2. Strength is equal bilaterally
- 3. Has met specific functional/activity goals
  - 4. Has been cleared by physician
